No problem, I just like to inform our Global partners and we are open for business. I know how busy you are and appreciate all the time you give us anyway!

I have also cracked the whip out here and am curious at what impact it may have, thus want to see as many sites as I can this year and then decide on next steps in the fall.

Regards,
Marian

Hi Marian,

Thanks for this. My folks (Brian et al.) will of course be on this key event. I myself will be in the Far East at the same time - sorry! But then back to your plots in July in Canada.

Regards

Klaus

Just to keep you informed, any potential individuals in your teams that may be interested in joining the tour?

Regards,
Marian

Please find attached the schedule for our annual com R&D field tour. It is a great opportunity to see our new technology in the field, to visit our field staff and to obtain first hand exposure to agriculture in action. It would be great if some of the RLT could find some time to join us on the tour, please also consider having others in your department attend as part of their personal development objectives. If you or others can join us, please let Stott/Becky know as soon as possible so the proper planning/arrangements can be made.

THANKS for your support,
Marian

Subject: Corn Tour Information

Dear Colleagues,

To facilitate travel planning I wanted to communicate the initial details for the Midwest Corn Tour. Participants will need to be in Minneapolis on 22 June for a very early start on Monday, 23 June. The transportation for the entirety of the week will be via coach/bus so internal flights will not be necessary. We will finish the tour on Friday afternoon and plan to have folks at the St Louis airport (or hotel near the airport) by 5:00 PM on Friday, 27 June.

The general itinerary is shaping up like this:

June. Host, region
23. Brett Miller, Minnesota
Bryan Ulmer, South Dakota
24. Adrian Moses, Iowa
25. Dave Thomas, Illinois
26. Steve Mroczkiewicz, Indiana
Scott Cully, Southern Illinois
27. Scott Cully, Southern Illinois

Technology featured on the tour will include: Stage 1 herbicides (DASH & HPPD), late lead finding, Halex GT (sequence concepts, adjuvants and additives), Lumax formulations, '449 concepts (s-moc premix, glyphosate premix, soil type/rate definitions, carry-over), mesotrione/atrazine mixtures, mesotrione/soybean tolerance, and competitor product profiles.

Becky Derscheid will be making arrangements for the tour. Please liaise with her regarding your travel details and needs. In order to facilitate the best possible outcome on logistics, please inform Becky of your participation by 1 May. Becky and I will advise of further details in the near future.

Regards,

Stott
